

## **BEST PRACTICES FOR WIRELESS INSTRUCTION IN THE CLASSROOM**

- If possible turn WiFi on *only* when using the Internet.
- Turn off wireless devices (laptops, computers, smart boards) when not in use.
- Place wireless devices in “airplane mode” when an internet connection is not required.
- Always place wireless devices on a solid desk or table surface (never on laps).
- Students should view their screens at a minimum distance of 12 inches.
- Create as much distance as possible between students using wireless devices.
- Unless built into a device, an app to reduce “blue” light from screens should be downloaded onto devices.
- Teachers and other staff members should regularly remind and instruct students in the use of best practices when using wireless devices.
